

# Resource Assessments

**Schedule a  
no obligation assessment now.**

**Call toll free 1-800-634-9010.**

- ◆ Reduce costs by up to 20% in each area
- ◆ Improve profitability by improving efficiency
- ◆ Reduce downtime and improve productivity
- ◆ Reduce damage to inventory
- ◆ Reduce personal injury claims
- ◆ Satisfy OSHA requirements for improving safety

## **Material Flow and Material Handling Fleet Assessment**

Our material handling systems specialists analyze the flow of material through your facilities, examining the interaction of your material handling equipment with that flow.

Critical benchmarking data is provided, including comparing your fleet performance against a national database of equipment in similar applications.

Inventory management and control processes are examined, including use of bar codes and radio frequency data collection.

## **Industrial Battery & Charger Assessment**

A complete assessment of your industrial batteries, battery watering, and handling system. Our material handling specialists can assist you in improving the efficiency, maintenance, and useful life of your industrial batteries and equipment.

## **Plant & Warehouse Equipment Assessment**

A careful documentation of all plant and warehouse products in your facility will help save you money by reducing service parts inventories. Information on your equipment is compiled and maintained by our Allied Lines Coordinator, including photos and written descriptions arranged by category.

## **Annual Aerial Lift Inspections**

Our experienced technicians know exactly where to look for trouble spots and help find problems early.

## **Fork Inspections**

Our trained and certified technicians use a highly effective, eight-point check system to detect wear on your forks or other front-end attachments before costly problems arise.

## **Tire Assessment**

Our tire specialist completes a careful inspection of your lift truck tires, looking for cuts, tears, embedded particles or excessive wear. When needed, our fully stocked mobile tire press truck can quickly and cost effectively install new tires.

## **Safety Assessment**

After an evaluation of your workplace that assesses damage caused by vehicle traffic and areas where vehicle traffic could cause injury to personnel, our specialists recommend products to eliminate or reduce those dangers.

## **Ergonomic/Personnel Safety Assessment**

After our evaluation of your current work environments, we suggest improvements to enhance personnel productivity and reduce repetitive injury on the job.

## **Spill Assessment**

A complete survey of liquid handling and storage practices in your facility helps you develop safe storage, containment, and dispensing systems to reduce chances of spills and falls.
